- T**H E Navigator's Assistant. Containing the Theory and Practice of Navigation, with all the Tables requisite for determining a Ship's Place at Sea. By William Nicholson, Author of an Introduction to natural Philosophy, in 2 vol. 8vo. ——— This Work contains every Element of practical Navigation, with all the modern Improvements rendered perfectly familiar and easy, at the same Time that every Attention has been paid to keep the whole strictly scientific, and dependent on itself throughout. The Properties and Uses of Hadley's Quadrant are amply explained, and applied to the Discovery of the Latitude and Longitude by various Methods. The Journal is minutely exemplified by Reference to a Set consisting of twelve Precepts, by the Help of which any one, though unacquainted with any Part of Navigation, may, without farther Assistance, in a few days, acquire the Method of keeping a Reckoning. The important, though too much neglected, Branch of nautical Knowledge, surveying of Harbours and Coasts, is treated in the same concise and open Manner; the requisite Instructions being not only arranged in Order, but the Precepts are likewise illustrated by a Drawing and particular References for every Part of the Process; and an extensive Collection of Tables is added, consisting of common logarithmic Tables, natural Sines, and logarithmic solar Tables, Traverse Table to a Distance of 300 meridional Parts, Lat. and Long. of Places, &c. In 1 vol. 8vo. bd,
